YERISWAMY DV

MECHANICAL DESIGN & PRODUCT SUSTAINING ENGINEER | DESIGN ASSURANCE | TEAM LEAD

Hitnal, Karnataka 583234, India | yerriswamydys18@gmail.com | 7022556720 | 8660524595 | linkedin.com/in/yeriswamy-dv-b40993158

Open to relocation | Visa sponsorship required | Target regions: Ireland, Switzerland, EU/Canada

PROFILE SUMMARY

Mechanical Design & Product Sustaining Engineer with 6+ years of experience delivering patient-specific orthopedic solutions, currently supporting knee and hip implant programs including Porous and Kinetic Alignment systems. Proven track record leading Design Control, Design Assurance, ECN/ECO, and Risk Management activities across active product lines in FDA and ISO 13485-regulated environments, while leading a 16-member engineering team.

CERTIFICATIONS

- ISO 13485:2016 – Medical Device Quality Management Systems (Udemy)
- Quality Management – Great Learning
- Project Management – Simplilearn (SkillUP)
- ISO 14971 – Risk Management for Medical Devices (in progress)

PROFILE

- Experience in product sustaining engineering and Design Assurance for patient-specific knee, hip, and ankle replacement systems throughout the product lifecycle.
- Managed Design Control, Design Assurance, ECN/ECO, DHF, CAPA, NCR, Risk Management, and Verification and Validation activities throughout the product lifecycle.
- Developed and modified implant and fixture designs using SolidWorks, Siemens NX, Creo, Autodesk Inventor, Autodesk Revit and AutoCAD.
- Collaborated with cross-functional engineering teams to deliver compliant engineering solutions.
- Supported FDA and ISO 13485 quality requirements while ensuring timely execution of engineering changes and documentation.

AREAS OF EXPERTISE

- Design Control • Design Assurance • Product Sustaining Engineering
- NCR Handling • DHF Documentation • CAPA Support
- Risk Management (ISO 14971) • FMEA • Orthopedic Implants
- Design Verification & Validation Support
- Engineering Change Management (ECN/ECO/DCR)
- Cross-Functional Team Leadership

ACCOMPLISHMENTS

- Successfully led a 16-member engineering team while maintaining quality and timely project execution.
- Led 1 CAPA investigation to closure and supported 5+ containment checks, ensuring timely resolution and regulatory compliance.
- Executed Engineering Change Management (ECN/ECO) and 4 Design Change Requests (DCRs), including design drawing revisions and Work Instruction updates.
- Received the restor3d Certificate of Recognition (2024) for outstanding performance, service, and dedication.
- Mentored engineers through task allocation, technical guidance, and quality reviews.
- Played a key role in engineering change implementation, ensuring product quality and regulatory compliance.

PROFESSIONAL EXPERIENCE

Product Sustaining Engineer

Conformis India LLP (acquired by restor3d)

Feb 2024 – Present

- Lead a 16-member engineering team, overseeing task allocation, project tracking, quality reviews, mentoring, and timely delivery of engineering activities.
- Support product sustaining engineering and Design Assurance for patient-specific knee, hip, and ankle replacement systems and associated surgical instruments.
- Perform CAD design modifications and engineering updates using SolidWorks, Siemens NX, and Creo.
- Manage Design Control activities throughout the product lifecycle in compliance with FDA and ISO 13485 requirements.
- Executed Engineering Change Management (ECN/ECO) and 4 Design Change Requests (DCRs), including design drawing revisions and Work Instruction (WI) updates, ensuring controlled implementation of approved changes.
- Support Verification & Validation (V&V) activities for product and process changes.
- Lead NCR investigations, Root Cause Analysis, CAPA support, and resolution of quality-related issues.
- Review implant geometry and patient-specific design outputs to ensure compliance with design intent and quality requirements.
- Collaborate with Quality, Manufacturing, Regulatory, and cross-functional engineering teams to deliver compliant engineering solutions.
- Participate in Risk Management (ISO 14971) activities and continuous product quality improvement initiatives.
- Received the restor3d Certificate of Recognition (2024) for Outstanding Performance, Service, and Dedication.

Team Lead – Product Design & Quality

Conformis India LLP

Apr 2022 – Jan 2024

- Led a 12-member team, overseeing task allocation, technical guidance, and quality reviews while continuing hands-on design and quality-check responsibilities.
- Performed part design using SolidWorks and supported segmentation-based design workflows for patient-specific implants.
- Conducted quality checks on implant and instrument designs, ensuring compliance with design intent and quality standards.
- Represented the team in regular quality meetings, coordinating with cross-functional stakeholders on design and quality status.

Team Member – Product Design & Quality

Conformis India LLP

Aug 2021 – Mar 2022

- Focused on part design and quality checks for patient-specific implants, working with segmentation and SolidWorks.
- Supported design modifications and quality verification as part of the product sustaining team.

Career Break

Aug 2019 – Aug 2021

Resigned to care for parents; returned to the workforce in Aug 2021.

CAD Engineer

Larsen & Toubro Technology Services

Jul 2018 – Aug 2019

- Supported orthopedic medical device development through jig and fixture design for product development and manufacturing.
- Designed jigs, fixtures, and CAD models using SolidWorks, Siemens NX, Creo, and Autodesk Inventor.
- Collaborated with cross-functional engineering teams to define technical requirements and optimize design solutions.
- Supported prototype development, design feasibility studies, and engineering validation activities.
- Prepared and maintained engineering drawings, design revisions, and technical documentation in accordance with quality standards.
- Contributed to product development by implementing design improvements and supporting engineering change activities.

Tool Maker (Jigs Manufacturing & Designing), Quality Control Checker

Rane Madras Pvt. Ltd

Jul 2017 – Jul 2018

- Designed and manufactured jigs and fixtures for steering gear components, supporting production and quality requirements.
- Created 2D/3D CAD models and engineering drawings using SolidWorks and AutoCAD.
- Supported manufacturing, assembly, testing, and design modifications for tooling components.
- Performed dimensional inspection using Vernier Calipers, Micrometers, Height Gauges, and Profile Projectors to ensure drawing compliance.
- Collaborated with production and quality teams to resolve manufacturing issues and improve tooling performance.
- Gained hands-on experience in tooling design, manufacturing processes, quality control, and engineering drawings.

PROJECTS

Porous CR Femoral & Tibial Implant Development – Identity Knee System
Conformis India LLP (acquired by restor3d)

- Contributed to design control activities for the porous cementless variant of the Identity CR knee system, working from design-intent documentation governing femoral and tibial implant geometry.
- Supported implementation of design guide requirements across femoral and tibial implant, tray, and iJig components in SolidWorks.
- Collaborated with Product Development and Digital Production teams to ensure designs met documented design intent and acceptance criteria.
- Participated in engineering change and documentation control activities associated with the Porous product line.

EDUCATION

Diploma in Tool and Die Making
Government Tool Room and Training Centre, Hospet
Jul 2014 – Jun 2018

Diploma focused on tool & die design and precision manufacturing. Gained practical and theoretical expertise in CAD/CAM, CNC machining, GD&T, engineering drawing, manufacturing processes, and quality control; completed hands-on projects in fixtures in tooling design.

6+ years of progressive, hands-on experience in FDA- and ISO 13485-regulated medical device engineering, substituting for formal degree requirements in relevant Design Control, Design Assurance, and Design Engineer roles.

TECHNICAL PROFICIENCIES

- CAD & Design Software: SolidWorks, Siemens NX (UG NX), Creo (Pro-E), Autodesk Inventor, AutoCAD, Autodesk Revit
- Medical Device Engineering: Design Control, Design Assurance, Engineering Change Management (ECN/ECO/DCR), DHF Documentation, Verification & Validation (V&V), CAPA, NCR Handling, Risk Management (ISO 14971)
- Quality & Regulatory: ISO 13485, FDA Design Control, Root Cause Analysis, FMEA, Medical Device Documentation
- Manufacturing & Mechanical: Orthopedic Implant Design, Jig & Fixture Design, Engineering Drawings, GD&T, Manufacturing Processes
- Leadership & Project Management: Team Leadership, Cross-functional Collaboration, Project Coordination, Technical Documentation, Quality Review
- Microsoft Office: Excel, Word, PowerPoint
